Dear Mr Bandt

MELBOURNE AIRPORT'S THIRD RUNWAY: PRELIMINARY DRAFT MAJOR DEVELOPMENT PLAN

In accordance with the requirements of the Airports Act 1996, I am pleased to advise that Australia Pacific Airports (Melbourne) Pty Limited (APAM) has prepared a Preliminary Draft Major Development Plan (MDP) for Melbourne Airport's Third Runway (M3R).

Melbourne Airport is Victoria's primary gateway for international and domestic aviation and time-critical freight. M3R will ensure that the airport continues to grow in line with projected increases to aircraft movements for both passenger and freight services and in doing so deliver material economic and employment benefits to Victoria.

The project will create an estimated 10,700 direct and indirect (related industries) jobs through the four to five-year construction period. The airport expects annual passenger numbers will grow to more than 76 million people in the next 20 years. Once completed and as activity increases, the new runway will support an additional 2,000 jobs each year across the aviation, tourism, and visitor economy

The new runway will be three kilometres long, located 1.3 kilometres to the west of and running parallel to the existing north-south runway. M3R will be connected to the airport's terminal apron and existing runways by a network of new taxiways.

The design of this critical piece of infrastructure will allow for simultaneous arrivals and departures on the parallel runways, which will significantly increase the airport's capacity to meet future demand and reduce the duration and impact of delays to improve the passenger experience.

Construction is anticipated to take four to five years. Once opened, the new runway will help support the growth of domestic and international travel as well as freight exports, injecting billions of dollars into the wider state economy and supporting thousands of jobs in tourism and related industries.

Environmental and sustainability are key priorities for the design, construction, and operation of the project. Melbourne Airport has a sustainable procurement policy and will use circular economy principals to ensure that recycled material is used in construction where possible.

Dear Ms Crooks

MELBOURNE AIRPORT'S THIRD RUNWAY: PRELIMINARY DRAFT MAJOR DEVELOPMENT PLAN

In accordance with the requirements of the Airports Act 1996, I am pleased to advise that Australia Pacific Airports (Melbourne) Pty Limited (APAM) has prepared a Preliminary Draft Major Development Plan (MDP) for Melbourne Airport's Third Runway (M3R).

Melbourne Airport is Victoria's primary gateway for international and domestic aviation and time-critical freight. M3R will ensure that the airport continues to grow in line with projected increases to aircraft movements for both passenger and freight services and in doing so deliver material economic and employment benefits to Victoria.

The project will create an estimated 10,700 direct and indirect (related industries) jobs through the four to five-year construction period. The airport expects annual passenger numbers will grow to more than 76 million people in the next 20 years. Once completed and as activity increases, the new runway will support an additional 2,000 jobs each year across the aviation, tourism, and visitor economy

The new runway will be three kilometres long, located 1.3 kilometres to the west of and running parallel to the existing north-south runway. M3R will be connected to the airport's terminal apron and existing runways by a network of new taxiways.

The design of this critical piece of infrastructure will allow for simultaneous arrivals and departures on the parallel runways, which will significantly increase the airport's capacity to meet future demand and reduce the duration and impact of delays to improve the passenger experience.

Construction is anticipated to take four to five years. Once opened, the new runway will help support the growth of domestic and international travel as well as freight exports, injecting billions of dollars into the wider state economy and supporting thousands of jobs in tourism and related industries.

Melbourne Airport Management

Locked Bag 16, Tullamarine, VIC 3043 Australia | +61 3 9297 1600
Australia Pacific Airports (Melbourne) Pty Ltd | A.C.N. 076 999 114

Environmental and sustainability are key priorities for the design, construction, and operation of the project. Melbourne Airport has a sustainable procurement policy and will use circular economy principals to ensure that recycled material is used in construction where possible.

Pursuant to Section 92(1) of the Airports Act 1996, the Preliminary Draft MDP will be available for public comment for a period of 71 business days commencing 1 February 2022. During this time, the Preliminary Draft MDP will be available on our website at www.melbourneairport.com.au/runway.

Following consideration of comments from the public and interested stakeholders, the Draft MDP will be provided to the Commonwealth Minister for Infrastructure, Transport and Regional Development for consideration of approval.

Should you require further information or would like to receive a briefing on this project, please contact Natali Klasevski, Policy Advisor, on 0421 189 270 or natali.klasevski@melair.com.au.

Dear Mr Chester

MELBOURNE AIRPORT'S THIRD RUNWAY: PRELIMINARY DRAFT MAJOR DEVELOPMENT PLAN

In accordance with the requirements of the Airports Act 1996, I am pleased to advise that Australia Pacific Airports (Melbourne) Pty Limited (APAM) has prepared a Preliminary Draft Major Development Plan (MDP) for Melbourne Airport's Third Runway (M3R).

Melbourne Airport is Victoria's primary gateway for international and domestic aviation and time-critical freight. M3R will ensure that the airport continues to grow in line with projected increases to aircraft movements for both passenger and freight services and in doing so deliver material economic and employment benefits to Victoria.

The project will create an estimated 10,700 direct and indirect (related industries) jobs through the four to five-year construction period. The airport expects annual passenger numbers will grow to more than 76 million people in the next 20 years. Once completed and as activity increases, the new runway will support an additional 2,000 jobs each year across the aviation, tourism, and visitor economy

The new runway will be three kilometres long, located 1.3 kilometres to the west of and running parallel to the existing north-south runway. M3R will be connected to the airport's terminal apron and existing runways by a network of new taxiways.

The design of this critical piece of infrastructure will allow for simultaneous arrivals and departures on the parallel runways, which will significantly increase the airport's capacity to meet future demand and reduce the duration and impact of delays to improve the passenger experience.

Construction is anticipated to take four to five years. Once opened, the new runway will help support the growth of domestic and international travel as well as freight exports, injecting billions of dollars into the wider state economy and supporting thousands of jobs in tourism and related industries.

Environmental and sustainability are key priorities for the design, construction, and operation of the project. Melbourne Airport has a sustainable procurement policy and will use circular economy principals to ensure that recycled material is used in construction where possible.

In accordance with the requirements of the Airports Act 1996, I am pleased to advise that Australia Pacific Airports (Melbourne) Pty Limited (APAM) has prepared a Preliminary Draft Major Development Plan (MDP) for Melbourne Airport's Third Runway (M3R).

Melbourne Airport is Victoria's primary gateway for international and domestic aviation and time-critical freight. M3R will ensure that the airport continues to grow in line with projected increases to aircraft movements for both passenger and freight services and in doing so deliver material economic and employment benefits to Victoria.

The project will create an estimated 10,700 direct and indirect (related industries) jobs through the four to five-year construction period. The airport expects annual passenger numbers will grow to more than 76 million people in the next 20 years. Once completed and as activity increases, the new runway will support an additional 2,000 jobs each year across the aviation, tourism, and visitor economy

The new runway will be three kilometres long, located 1.3 kilometres to the west of and running parallel to the existing north-south runway. M3R will be connected to the airport's terminal apron and existing runways by a network of new taxiways.

The design of this critical piece of infrastructure will allow for simultaneous arrivals and departures on the parallel runways, which will significantly increase the airport's capacity to meet future demand and reduce the duration and impact of delays to improve the passenger experience.

Construction is anticipated to take four to five years. Once opened, the new runway will help support the growth of domestic and international travel as well as freight exports, injecting billions of dollars into the wider state economy and supporting thousands of jobs in tourism and related industries.

Environmental and sustainability are key priorities for the design, construction, and operation of the project. Melbourne Airport has a sustainable procurement policy and will use circular economy principals to ensure that recycled material is used in construction where possible.

The project will create an estimated 10,700 direct and indirect (related industries) jobs through the four to five-year construction period. The airport expects annual passenger numbers will grow to more than 76 million people in the next 20 years. Once completed and as activity increases, the new runway will support an additional 2,000 jobs each year across the aviation, tourism, and visitor economy

The new runway will be three kilometres long, located 1.3 kilometres to the west of and running parallel to the existing north-south runway. M3R will be connected to the airport's terminal apron and existing runways by a network of new taxiways.

The design of this critical piece of infrastructure will allow for simultaneous arrivals and departures on the parallel runways, which will significantly increase the airport's capacity to meet future demand and reduce the duration and impact of delays to improve the passenger experience.

Construction is anticipated to take four to five years. Once opened, the new runway will help support the growth of domestic and international travel as well as freight exports, injecting billions of dollars into the wider state economy and supporting thousands of jobs in tourism and related industries.

Once completed and as activity increases, the new runway will support an additional 2,000 jobs each year across the aviation, tourism, and visitor economy

The new runway will be three kilometres long, located 1.3 kilometres to the west of and running parallel to the existing north-south runway. M3R will be connected to the airport's terminal apron and existing runways by a network of new taxiways.

The design of this critical piece of infrastructure will allow for simultaneous arrivals and departures on the parallel runways, which will significantly increase the airport's capacity to meet future demand and reduce the duration and impact of delays to improve the passenger experience.

Construction is anticipated to take four to five years. Once opened, the new runway will help support the growth of domestic and international travel as well as freight exports, injecting billions of dollars into the wider state economy and supporting thousands of jobs in tourism and related industries.

Dear Minister

MELBOURNE AIRPORT'S THIRD RUNWAY: PRELIMINARY DRAFT MAJOR DEVELOPMENT PLAN

In accordance with the requirements of the Airports Act 1996, I am pleased to advise that Australia Pacific Airports (Melbourne) Pty Limited (APAM) has prepared a Preliminary Draft Major Development Plan (MDP) for Melbourne Airport's Third Runway (M3R).

Melbourne Airport is Victoria's primary gateway for international and domestic aviation and time-critical freight. M3R will ensure that the airport continues to grow in line with projected increases to aircraft movements for both passenger and freight services and in doing so deliver material economic and employment benefits to Victoria.

The project will create an estimated 10,700 direct and indirect (related industries) jobs through the four to five-year construction period. The airport expects annual passenger numbers will grow to more than 76 million people in the next 20 years. Once completed and as activity increases, the new runway will support an additional 2,000 jobs each year across the aviation, tourism, and visitor economy

The new runway will be three kilometres long, located 1.3 kilometres to the west of and running parallel to the existing north-south runway. M3R will be connected to the airport's terminal apron and existing runways by a network of new taxiways.

The design of this critical piece of infrastructure will allow for simultaneous arrivals and departures on the parallel runways, which will significantly increase the airport's capacity to meet future demand and reduce the duration and impact of delays to improve the passenger experience.

Construction is anticipated to take four to five years. Once opened, the new runway will help support the growth of domestic and international travel as well as freight exports, injecting billions of dollars into the wider state economy and supporting thousands of jobs in tourism and related industries.

The airport expects annual passenger numbers will grow to more than 76 million people in the next 20 years. Once completed and as activity increases, the new runway will support an additional 2,000 jobs each year across the aviation, tourism, and visitor economy

The new runway will be three kilometres long, located 1.3 kilometres to the west of and running parallel to the existing north-south runway. M3R will be connected to the airport's terminal apron and existing runways by a network of new taxiways.

The design of this critical piece of infrastructure will allow for simultaneous arrivals and departures on the parallel runways, which will significantly increase the airport's capacity to meet future demand and reduce the duration and impact of delays to improve the passenger experience.

Construction is anticipated to take four to five years. Once opened, the new runway will help support the growth of domestic and international travel as well as freight exports, injecting billions of dollars into the wider state economy and supporting thousands of jobs in tourism and related industries.

Dear Senator

MELBOURNE AIRPORT'S THIRD RUNWAY: PRELIMINARY DRAFT MAJOR DEVELOPMENT PLAN

In accordance with the requirements of the Airports Act 1996, I am pleased to advise that Australia Pacific Airports (Melbourne) Pty Limited (APAM) has prepared a Preliminary Draft Major Development Plan (MDP) for Melbourne Airport's Third Runway (M3R).

Melbourne Airport is Victoria's primary gateway for international and domestic aviation and time-critical freight. M3R will ensure that the airport continues to grow in line with projected increases to aircraft movements for both passenger and freight services and in doing so deliver material economic and employment benefits to Victoria.

The project will create an estimated 10,700 direct and indirect (related industries) jobs through the four to five-year construction period. The airport expects annual passenger numbers will grow to more than 76 million people in the next 20 years. Once completed and as activity increases, the new runway will support an additional 2,000 jobs each year across the aviation, tourism, and visitor economy

The new runway will be three kilometres long, located 1.3 kilometres to the west of and running parallel to the existing north-south runway. M3R will be connected to the airport's terminal apron and existing runways by a network of new taxiways.

The design of this critical piece of infrastructure will allow for simultaneous arrivals and departures on the parallel runways, which will significantly increase the airport's capacity to meet future demand and reduce the duration and impact of delays to improve the passenger experience.

Construction is anticipated to take four to five years. Once opened, the new runway will help support the growth of domestic and international travel as well as freight exports, injecting billions of dollars into the wider state economy and supporting thousands of jobs in tourism and related industries.

Environmental and sustainability are key priorities for the design, construction, and operation of the project. Melbourne Airport has a sustainable procurement policy and will use circular economy principals to ensure that recycled material is used in construction where possible.

The project will create an estimated 10,700 direct and indirect (related industries) jobs through the four to five-year construction period. The airport expects annual passenger numbers will grow to more than 76 million people in the next 20 years. Once completed and as activity increases, the new runway will support an additional 2,000 jobs each year across the aviation, tourism, and visitor economy

The new runway will be three kilometres long, located 1.3 kilometres to the west of and running parallel to the existing north-south runway. M3R will be connected to the airport's terminal apron and existing runways by a network of new taxiways.

The design of this critical piece of infrastructure will allow for simultaneous arrivals and departures on the parallel runways, which will significantly increase the airport's capacity to meet future demand and reduce the duration and impact of delays to improve the passenger experience.

Construction is anticipated to take four to five years. Once opened, the new runway will help support the growth of domestic and international travel as well as freight exports, injecting billions of dollars into the wider state economy and supporting thousands of jobs in tourism and related industries.

MELBOURNE AIRPORT'S THIRD RUNWAY: PRELIMINARY DRAFT MAJOR DEVELOPMENT PLAN

In accordance with the requirements of the Airports Act 1996, I am pleased to advise that Australia Pacific Airports (Melbourne) Pty Limited (APAM) has prepared a Preliminary Draft Major Development Plan (MDP) for Melbourne Airport's Third Runway (M3R).

Melbourne Airport is Victoria's primary gateway for international and domestic aviation and time-critical freight. M3R will ensure that the airport continues to grow in line with projected increases to aircraft movements for both passenger and freight services and in doing so deliver material economic and employment benefits to Victoria.

The project will create an estimated 10,700 direct and indirect (related industries) jobs through the four to five-year construction period. The airport expects annual passenger numbers will grow to more than 76 million people in the next 20 years. Once completed and as activity increases, the new runway will support an additional 2,000 jobs each year across the aviation, tourism, and visitor economy

The new runway will be three kilometres long, located 1.3 kilometres to the west of and running parallel to the existing north-south runway. M3R will be connected to the airport's terminal apron and existing runways by a network of new taxiways.

The design of this critical piece of infrastructure will allow for simultaneous arrivals and departures on the parallel runways, which will significantly increase the airport's capacity to meet future demand and reduce the duration and impact of delays to improve the passenger experience.

Construction is anticipated to take four to five years. Once opened, the new runway will help support the growth of domestic and international travel as well as freight exports, injecting billions of dollars into the wider state economy and supporting thousands of jobs in tourism and related industries.

Melbourne Airport is Victoria's primary gateway for international and domestic aviation and time-critical freight. M3R will ensure that the airport continues to grow in line with projected increases to aircraft movements for both passenger and freight services and in doing so deliver material economic and employment benefits to Victoria.

The project will create an estimated 10,700 direct and indirect (related industries) jobs through the four to five-year construction period. The airport expects annual passenger numbers will grow to more than 76 million people in the next 20 years. Once completed and as activity increases, the new runway will support an additional 2,000 jobs each year across the aviation, tourism, and visitor economy

The new runway will be three kilometres long, located 1.3 kilometres to the west of and running parallel to the existing north-south runway. M3R will be connected to the airport's terminal apron and existing runways by a network of new taxiways.

The design of this critical piece of infrastructure will allow for simultaneous arrivals and departures on the parallel runways, which will significantly increase the airport's capacity to meet future demand and reduce the duration and impact of delays to improve the passenger experience.

Construction is anticipated to take four to five years. Once opened, the new runway will help support the growth of domestic and international travel as well as freight exports, injecting billions of dollars into the wider state economy and supporting thousands of jobs in tourism and related industries.

Environmental and sustainability are key priorities for the design, construction, and operation of the project. Melbourne Airport has a sustainable procurement policy and will use circular economy principals to ensure that recycled material is used in construction where possible.

Pursuant to Section 92(1) of the Airports Act 1996, the Preliminary Draft MDP will be available for public comment for a period of 71 business days commencing 1 February 2022. During this time, the Preliminary Draft MDP will be available on our website at www.melbourneairport.com.au/runway.

Following consideration of comments from the public and interested stakeholders, the Draft MDP will be provided to the Commonwealth Minister for Infrastructure, Transport and Regional Development for consideration of approval.

The project will create an estimated 10,700 direct and indirect (related industries) jobs through the four to five-year construction period. The airport expects annual passenger numbers will grow to more than 76 million people in the next 20 years. Once completed and as activity increases, the new runway will support an additional 2,000 jobs each year across the aviation, tourism, and visitor economy

The new runway will be three kilometres long, located 1.3 kilometres to the west of and running parallel to the existing north-south runway. M3R will be connected to the airport's terminal apron and existing runways by a network of new taxiways.

The design of this critical piece of infrastructure will allow for simultaneous arrivals and departures on the parallel runways, which will significantly increase the airport's capacity to meet future demand and reduce the duration and impact of delays to improve the passenger experience.

Construction is anticipated to take four to five years. Once opened, the new runway will help support the growth of domestic and international travel as well as freight exports, injecting billions of dollars into the wider state economy and supporting thousands of jobs in tourism and related industries.

Environmental and sustainability are key priorities for the design, construction, and operation of the project. Melbourne Airport has a sustainable procurement policy and will use circular economy principals to ensure that recycled material is used in construction where possible.

Dear Mr Sharp

MELBOURNE AIRPORT'S THIRD RUNWAY: PRELIMINARY DRAFT MAJOR DEVELOPMENT PLAN

In accordance with the requirements of the Airports Act 1996, I am pleased to advise that Australia Pacific Airports (Melbourne) Pty Limited (APAM) has prepared a Preliminary Draft Major Development Plan (MDP) for Melbourne Airport's Third Runway (M3R).

Melbourne Airport is Victoria's primary gateway for international and domestic aviation and time-critical freight. M3R will ensure that the airport continues to grow in line with projected increases to aircraft movements for both passenger and freight services and in doing so deliver material economic and employment benefits to Victoria.

The project will create an estimated 10,700 direct and indirect (related industries) jobs through the four to five-year construction period. The airport expects annual passenger numbers will grow to more than 76 million people in the next 20 years. Once completed and as activity increases, the new runway will support an additional 2,000 jobs each year across the aviation, tourism, and visitor economy

The new runway will be three kilometres long, located 1.3 kilometres to the west of and running parallel to the existing north-south runway. M3R will be connected to the airport's terminal apron and existing runways by a network of new taxiways.

The design of this critical piece of infrastructure will allow for simultaneous arrivals and departures on the parallel runways, which will significantly increase the airport's capacity to meet future demand and reduce the duration and impact of delays to improve the passenger experience.

Construction is anticipated to take four to five years. Once opened, the new runway will help support the growth of domestic and international travel as well as freight exports, injecting billions of dollars into the wider state economy and supporting thousands of jobs in tourism and related industries.

Environmental and sustainability are key priorities for the design, construction, and operation of the project. Melbourne Airport has a sustainable procurement policy and will use circular economy principals to ensure that recycled material is used in construction where possible.

Pursuant to Section 92(1) of the Airports Act 1996, the Preliminary Draft MDP will be available for public comment for a period of 71 business days commencing 1 February 2022. During this time, the Preliminary Draft MDP will be available on our website at www.melbourneairport.com.au/runway.

Following consideration of comments from the public and interested stakeholders, the Draft MDP will be provided to the Commonwealth Minister for Infrastructure, Transport and Regional Development for consideration of approval.

MELBOURNE AIRPORT'S THIRD RUNWAY: PRELIMINARY DRAFT MAJOR DEVELOPMENT PLAN

In accordance with the requirements of the Airports Act 1996, I am pleased to advise that Australia Pacific Airports (Melbourne) Pty Limited (APAM) has prepared a Preliminary Draft Major Development Plan (MDP) for Melbourne Airport's Third Runway (M3R).

Melbourne Airport is Victoria's primary gateway for international and domestic aviation and time-critical freight. M3R will ensure that the airport continues to grow in line with projected increases to aircraft movements for both passenger and freight services and in doing so deliver material economic and employment benefits to Victoria.

The project will create an estimated 10,700 direct and indirect (related industries) jobs through the four to five-year construction period. The airport expects annual passenger numbers will grow to more than 76 million people in the next 20 years. Once completed and as activity increases, the new runway will support an additional 2,000 jobs each year across the aviation, tourism, and visitor economy

The new runway will be three kilometres long, located 1.3 kilometres to the west of and running parallel to the existing north-south runway. M3R will be connected to the airport's terminal apron and existing runways by a network of new taxiways.

The design of this critical piece of infrastructure will allow for simultaneous arrivals and departures on the parallel runways, which will significantly increase the airport's capacity to meet future demand and reduce the duration and impact of delays to improve the passenger experience.

Construction is anticipated to take four to five years. Once opened, the new runway will help support the growth of domestic and international travel as well as freight exports, injecting billions of dollars into the wider state economy and supporting thousands of jobs in tourism and related industries.

Environmental and sustainability are key priorities for the design, construction, and operation of the project. Melbourne Airport has a sustainable procurement policy and will use circular economy principals to ensure that recycled material is used in construction where possible.

Dear Mr Smith

MELBOURNE AIRPORT'S THIRD RUNWAY: PRELIMINARY DRAFT MAJOR DEVELOPMENT PLAN

In accordance with the requirements of the Airports Act 1996, I am pleased to advise that Australia Pacific Airports (Melbourne) Pty Limited (APAM) has prepared a Preliminary Draft Major Development Plan (MDP) for Melbourne Airport's Third Runway (M3R).

Melbourne Airport is Victoria's primary gateway for international and domestic aviation and time-critical freight. M3R will ensure that the airport continues to grow in line with projected increases to aircraft movements for both passenger and freight services and in doing so deliver material economic and employment benefits to Victoria.

The project will create an estimated 10,700 direct and indirect (related industries) jobs through the four to five-year construction period. The airport expects annual passenger numbers will grow to more than 76 million people in the next 20 years. Once completed and as activity increases, the new runway will support an additional 2,000 jobs each year across the aviation, tourism, and visitor economy

The new runway will be three kilometres long, located 1.3 kilometres to the west of and running parallel to the existing north-south runway. M3R will be connected to the airport's terminal apron and existing runways by a network of new taxiways.

The design of this critical piece of infrastructure will allow for simultaneous arrivals and departures on the parallel runways, which will significantly increase the airport's capacity to meet future demand and reduce the duration and impact of delays to improve the passenger experience.

Construction is anticipated to take four to five years. Once opened, the new runway will help support the growth of domestic and international travel as well as freight exports, injecting billions of dollars into the wider state economy and supporting thousands of jobs in tourism and related industries.

M3R will ensure that the airport continues to grow in line with projected increases to aircraft movements for both passenger and freight services and in doing so deliver material economic and employment benefits to Victoria.

The project will create an estimated 10,700 direct and indirect (related industries) jobs through the four to five-year construction period. The airport expects annual passenger numbers will grow to more than 76 million people in the next 20 years. Once completed and as activity increases, the new runway will support an additional 2,000 jobs each year across the aviation, tourism, and visitor economy

The new runway will be three kilometres long, located 1.3 kilometres to the west of and running parallel to the existing north-south runway. M3R will be connected to the airport's terminal apron and existing runways by a network of new taxiways.

The design of this critical piece of infrastructure will allow for simultaneous arrivals and departures on the parallel runways, which will significantly increase the airport's capacity to meet future demand and reduce the duration and impact of delays to improve the passenger experience.

Construction is anticipated to take four to five years. Once opened, the new runway will help support the growth of domestic and international travel as well as freight exports, injecting billions of dollars into the wider state economy and supporting thousands of jobs in tourism and related industries.

Once completed and as activity increases, the new runway will support an additional 2,000 jobs each year across the aviation, tourism, and visitor economy

The new runway will be three kilometres long, located 1.3 kilometres to the west of and running parallel to the existing north-south runway. M3R will be connected to the airport's terminal apron and existing runways by a network of new taxiways.

The design of this critical piece of infrastructure will allow for simultaneous arrivals and departures on the parallel runways, which will significantly increase the airport's capacity to meet future demand and reduce the duration and impact of delays to improve the passenger experience.

Construction is anticipated to take four to five years. Once opened, the new runway will help support the growth of domestic and international travel as well as freight exports, injecting billions of dollars into the wider state economy and supporting thousands of jobs in tourism and related industries.

Environmental and sustainability are key priorities for the design, construction, and operation of the project. Melbourne Airport has a sustainable procurement policy and will use circular economy principals to ensure that recycled material is used in construction where possible.

Pursuant to Section 92(1) of the Airports Act 1996, the Preliminary Draft MDP will be available for public comment for a period of 71 business days commencing 1 February 2022. During this time, the Preliminary Draft MDP will be available on our website at www.melbourneairport.com.au/runway.

Following consideration of comments from the public and interested stakeholders, the Draft MDP will be provided to the Commonwealth Minister for Infrastructure, Transport and Regional Development for consideration of approval.

Dear Mr Phemister

MELBOURNE AIRPORT'S THIRD RUNWAY: PRELIMINARY DRAFT MAJOR DEVELOPMENT PLAN

In accordance with the requirements of the Airports Act 1996, I am pleased to advise that Australia Pacific Airports (Melbourne) Pty Limited (APAM) has prepared a Preliminary Draft Major Development Plan (MDP) for Melbourne Airport's Third Runway (M3R).

Melbourne Airport is Victoria's primary gateway for international and domestic aviation and time-critical freight. M3R will ensure that the airport continues to grow in line with projected increases to aircraft movements for both passenger and freight services and in doing so deliver material economic and employment benefits to Victoria.

The project will create an estimated 10,700 direct and indirect (related industries) jobs through the four to five-year construction period. The airport expects annual passenger numbers will grow to more than 76 million people in the next 20 years. Once completed and as activity increases, the new runway will support an additional 2,000 jobs each year across the aviation, tourism, and visitor economy

The new runway will be three kilometres long, located 1.3 kilometres to the west of and running parallel to the existing north-south runway. M3R will be connected to the airport's terminal apron and existing runways by a network of new taxiways.

The design of this critical piece of infrastructure will allow for simultaneous arrivals and departures on the parallel runways, which will significantly increase the airport's capacity to meet future demand and reduce the duration and impact of delays to improve the passenger experience.

Construction is anticipated to take four to five years. Once opened, the new runway will help support the growth of domestic and international travel as well as freight exports, injecting billions of dollars into the wider state economy and supporting thousands of jobs in tourism and related industries.
